

AS/NZS 3666 PART 4 PLANT RISK ASSESSMENTS FOR MICROBIAL CONTROL WITHIN AIR-HANDLING SYSTEMS

TVH has introduced new HVAC Audits in compliance with AS/NZS 3666.4:2011 Performance-based maintenance of air-handling systems ducts and components.

AS/NZS 3666.4 outlines a performance-based approach to the maintenance of air-handling systems with respect to the control of microorganisms.

It is an alternative to the prescriptive requirements of AS/NSZ 3666.2 (Clause 2.3.5) for the maintenance of air-handling systems other than those incorporating water-supplied devices (e.g. humidifiers & evaporator coils). By following AS/NZS 3666.4 you will also be in compliance with AS/NSZ 3666.2 (Clause 2.3.5).

THERE ARE FOUR STAGES TO CONDUCT A RISK ASSESSMENT AS PER THE AS/NZS 3666.4

STAGE 1 STAGE ONE

1

On-site Assessment of air-handling systems as outlined in the standard by a competent person.

STAGE 2 EVALUATION AND REPORTING

2

Evaluate risk of growth and spread of microorganisms. Report using risk matrix and classification procedure to form part of the building owner's facility management reporting system.

STAGE 3 IMPLEMENTATION OF COMPLIANCE

3

Rectification Works; maintenance policy; operating and maintenance manual.

STAGE 4 VERIFICATION OF RECTIFICATION

4

Develop compliance schedule for any required rectification works and verify completion by required timeframes.
